

Promoting International Teaching and Learning Collaborations in Geography and Related Disciplines

Invitation to Join and Participate

Are you interested in teaching global issues to college students?

Do you want to expand your professional networks in other countries?

Could your students benefit from learning in an international community?

The AAG's Center for Global Geography Education (CGGE) provides open access to an online collection of undergraduate course modules examining important social, economic, and environmental issues. CGGE modules are designed to improve the learning and appreciation of geography by connecting students worldwide and engaging them in international collaboration and dialogue -- all through the Internet.

The AAG also sponsors CGGE workshops at academic conferences and symposia to provide faculty with training and networking opportunities.

Contact the CGGE project directors today and learn more about how to get involved teaching the next generation of global citizens. For additional information, please visit the CGGE website:

globalgeography.aag.org

Project Directors:

Michael Solem: msolem@aag.org

Phil Klein: phil.klein@unco.edu

Oswaldo Muñiz: o.muniz@txstate.edu

About the CGGE Modules

Current titles include *Population, Nationalism, Global Economy, Water Resources, Migration, and Global Climate Change*. Each features:

- Diverse and compelling case studies about geographic issues
- Flexible content suitable for many types of undergraduate courses
- Content in multiple languages
- Electronic calendars for planning international collaborations
- Moodle-based website for group learning and collaboration
- Activities supporting spatial thinking and geographic inquiry
- Dynamic classroom presentations
